Avago Technologies offers the industry's best isolation technology along with the industry's leading CMR performance

Avago Technologies optocouplers can be used in an array of isolation applications ranging from power supply and motor control circuits to data communications and digital logic interface circuits.

The primary purpose of an optocoupler is to provide both electrical insulation and signal isolation. The popularity of Avago Technologies optocouplers is due to cost effective innovations in these areas.

Optocouplers eliminate the effects of electrical noise caused by crosstalk, power glitches and electrical interference. They provide high voltage isolation allowing safe interface between high and low voltages in electrical circuits. They are also used for shifting logic levels. Avago Technologies' key products include optocouplers with phototransistor output, digital and analog output, high speed and high gain performance, drivers for isolated gate transistors and intelligent power modules, smart current sensors, solid state relay (Photo MOSFET) and other application specific devices.

Avago Technologies offers the industry's best isolation technology along with the industry's leading CMR performance of up to 50 kV/ μ s in a broad line of packages. Products include the lowest power dissipation with input current as low as 40 μ A, high speed digital optocouplers operating at up to 50 MBd, propagation delays as low as 22 ns, 3.3 V JEDEC compatible optocouplers. Avago Technologies' optocouplers are manufactured with high quality and reliability and have worldwide safety approvals including the highest maximum insulation voltage (V_{IORM}) at 2262 V_{PEAK} (per IEC/EN/DIN EN 60747-5-5).

Avago Technologies offers a broad range of isolation products that provide performance features and benefits that are unmatched in the industry for industrial, computing, consumer, communication, medical, military and aerospace markets.

Applications for Avago Technologies' Isolation Products

Industrial

The widest portfolio of optocouplers to meet the extensive requirements of applications in factory automation.

- Automated test equipment
- Battery operated vehicle
- Fieldbus
- Industrial communications
- Industrial networking
- Motor control
- PLC input/output isolation
- Power distribution systems
- Power generation
- Renewable energy power generation
- Energy storage system
- Electric vehicle charging station
- Robotics
- Switching panel
- Switching power supplies
- Test and measurement equipment

Automotive

Avago Technologies automotive R²Coupler™ are AEC-Q100 qualified with applications in:

- Automotive and shipboard system CANBus interface isolation
- Motor inverter drives
- DC-DC converters/inverters for battery chargers
- Battery/inverter voltage monitoring
- Status/fault signal feedback isolation interface
- Heating, ventilation and air conditioning

Medical

Avago Technologies offers optocouplers with high linearity and high resolution for severe isolation requirements to:

- Defibrillators
- ECG/EKG
- Endoscopes
- Magnetic resonance imaging
- Patient monitoring

Computers and Office Equipment

Avago Technologies' optocouplers with CMOS compatibility and high speed are used to provide interface isolation for:

- Isolated input/output module
- Isolated USB hub
- Printers and plotters

Communications

Avago Technologies provides high speed optocouplers in both single and dual surface-mount packages which are used in:

- Automated metering reading
- Digital cross connect
- Distributed power architecture
- ISDN
- Modems
- PBX and central office
- Power line communication
- Power over ethernet
- Telephone switching equipment
- Telephone terminal equipment
- Wireless base station

Consumer Electronics

Avago Technologies offers lower solution costs with highly integrated optocouplers for many consumer applications, such as:

- Air conditioning
- Alarm systems
- Audio and video equipment
- Electronic gaming
- Fitness equipment
- Induction cookers
- Plasma displays
- Washing machines

Military and Aerospace

Avago Technologies' high reliability hermetic optocouplers are suitable for military, aerospace and harsh industrial applications such as:

- Switching power supplies /UPS
- Motor control
- Field bus
- Inverters
- Power distribution
- Communications

Quick Guide to Direct Upgrades

Upgrade Part	Feature	Benefit
High Voltage Insulation		
Improved Isolation/Insulation Ability to protect surrounding circuitry against physical damage resulting from differential voltages.	ACNT-Hxxx and ACNV family offers highest available working voltage ratings with regulatory approval per IEC/EN/DIN EN 60747-5-5 of 2262 V peak.	Meets international safety regulations and standards. Provides better isolation and overall safety performance.
Noise Isolation		
High CMR Common-mode transient rejection or signal isolation of data through suppression of noise transients.	Offers guaranteed CMR performance up to 50 kV/μs which is the highest available in the market.	Improves system performance, and reliability. More robust systems and better data integrity meet EMI and ESD requirements.
Power Consumption		
Drive Current, I_F Low Drive Current, LED drive current.	Offers the lowest I_F (as low as 40 μA) devices in the market and broadest HCMOS compatibility.	Eliminates additional LED drive circuitry. Improves system efficiency and reduces power consumption and LED degradation.
Lower Power Supply Lower power supply (3.3V)	Lower the power consumption and meets JEDEC low voltage requirements.	Up to 50% energy saving.
Flexible Supply Voltages (3.3V/5V)	Support a combination of two different supply voltages at the input and output.	Built-in internal level shifter , eliminate the need of extra power supply. 3.3V or 5V. 3.3V helps to improve the overall power consumption.
Temperature		
Temperature The DC, speed performance and the reliability information is ensured at the specific temperature range.	Support up to -55°C to 125°C temperature range.	Allow extreme temperature operation.
Speed Benefits		
Propagation Delay, t_p Describes how quickly a logic signal can propagate through the system.	High speed digital optocouplers to meet wide range of applications with t_p as low as 22 ns .	Increase switching efficiency and better speed performance.
Upgrade Pulse Width Distortion, PWD PWD is the difference between t _{rHL} and t _{rLH} and often determines the maximum data rate capability of a transmission system.	The lowest PWD offered by optocoupler is 2 ns .	To ensure signal data integrity over long bus line.
Packages for Space Savings		
Multi-Channels, Bi-directional Features	Integrated dual, triple, quad with bi-directional channels offers in small SO8 and SO16 package. 2-channels Bidirectional offers in new Stretched SO12 package.	The integrated bi-directional channels help in space savings and ease of designs.
Surface Mount Device SMD permits more component density than DIP.	Smaller package to deliver the same functionality as standard DIP. True surface mount technology and standard footprint.	Lower assembly cost , easier and faster handling as well as better solderability.
8mm Clearance/Creepage (C/C) Packages	The package is 50% smaller than conventional DIP package. It can withstand high isolation voltages and meet regulatory requirements such as IEC/UL/CSA standards.	Provides space savings . Allows high voltage surge protection. Meets many IEC/UL/CSA equipment standards that call for clearance and creepage of 8mm.
Smaller SO5 Package	Smaller SO5 package (as compared to existing SO-8 package).	Provides greater than 40% space savings .

Multi-Channel Bi-Directional Digital Optocoupler

Description

The ACSL-6xx0 series are optoisolated, multi-channel and bidirectional, high-speed optocouplers. Integration of multiple optocouplers in monolithic form is achieved through patented process technology. These devices provide full duplex and bidirectional isolated data transfer and communication capability in compact surface mount packages. They are available in a 15Mbd speed option, wide supply voltage range and wide temperature range. For higher speed requirement, ACSL-7210 is 25MBd dual-channel bi-directional optocoupler with buffered inputs (not LED driven inputs).

The isolated data acquisition system is ideal for digitizing the output of the sensors that operate in hostile environment. The ADC is a 24-bit sigma delta or fast conversion type, converts the analog voltage to a digital number. The digital number represents the input voltage in discrete steps with finite resolution. The quad-channel and bi-directional, ACSL-6410, provides high CMR of 10kV/ μ s and electrical isolation of 2500Vrms between the host system and the data acquisition circuitry and sensors. The power supply is also isolated, usually via a transformer to isolate the AC line voltage from the DC voltages generated to power the data acquisition system.

The ACFL-xxxxU is the new package with fine pitch of 0.8mm and operating temperature up to 125°. They come in the new compact stretched SO12 package, able to accommodate 2-channels bi-directional, which helps to reduce PCB board space and each channel is also galvanically isolated from the other channel. They are used for serial communication isolation for inverter drives and medical equipments that require reinforced isolation with > 8mm creepage/clearance and/or VISO at 5KVrms.

Benefits

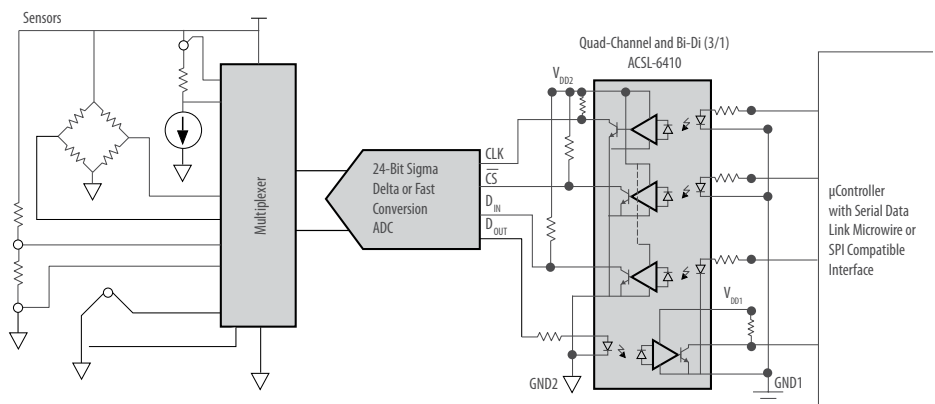

- Higher integration - multi-channel provides small and thin packages for space savings; bi-directional channel facilitates pcb routing
- Wide voltage supply and temperature
 - provides design flexibility

Applications

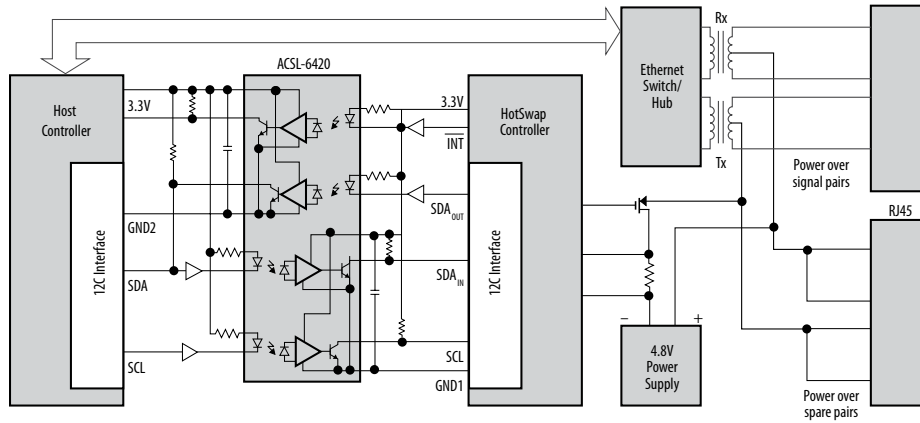

- Full duplex communication
- Isolated line receiver
- Computer-peripheral interfaces
- Microprocessor system interfaces
- Digital isolation for A/D and D/A conversion
- Switching power supply
- Instrument input/output isolation
- Ground loop elimination
- Pulse transformer replacement

High Speed Digital CMOS Logic Gate Optocoupler

Description

These optocouplers use the latest CMOS IC technology to achieve outstanding performance with very low power consumption. Serial fieldbuses are used today primarily as the communication system for the exchange of information between automation system and distributed field devices. PROFIBUS is the leading open fieldbus system and it has worldwide acceptance. PROFIBUS is essentially a twisted wire pair serial link that is very similar to RS 485. Profibus speed standard is either lower speed (1.5 MBd) or higher speed (12 MBd).

In this isolated multipoint transmission application circuit, two different optoisolators are utilized (HCPL-0721 and HCPL-061N). The benefits include low input drive current that maximizes LED lifetime/reliability and optimizes speed for Profibus and RS-485 applications.

Benefits

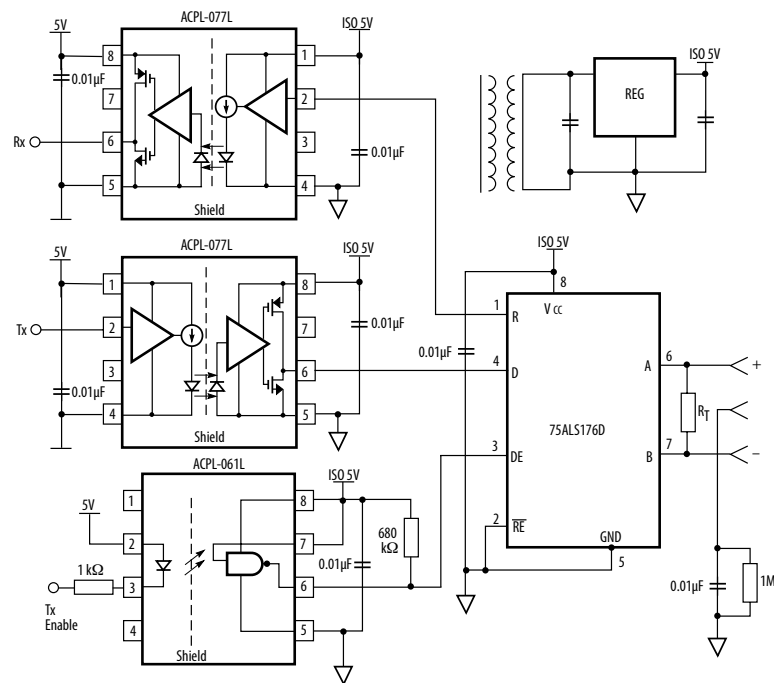

- High speed (up to 50 MBd)
- 3.3V/5V dual supply voltage available
- Wide temperature operation -40°C to 100°C (HCPL-x710)
- Low PWD (2ns) & low tp (22ns) to meet DeviceNet and Profibus application
- Buffer input and CMOS output to eliminate any pull-up resistor
- 5 kV isolation voltage (HCPL-77xx)
- Dual channel device is available to save space (HCPL-0738)
- Certified with reinforced insulation under IEC/EN/DIN EN 60747-5-5

Applications

- AC plasma display panel level shifting
- CAN Bus
- CC_Link
- Microprocessor system interface
- Multiplexed data transmission
- Switching power supply

20 MBd Logic Gate Optocoupler

Description

These optocouplers have high data rate capability and low input current requirements. In analog-to-digital converters, designers should isolate the two portions of a circuit so that interference generated by digital switching and clock signals are not coupled to the analog section. The below figure demonstrates the ability of optocouplers to achieve isolation in a high speed parallel interface data communication application. Optocouplers reduce the channel distortion and thereby maximize the reliability of the circuit.

Benefits

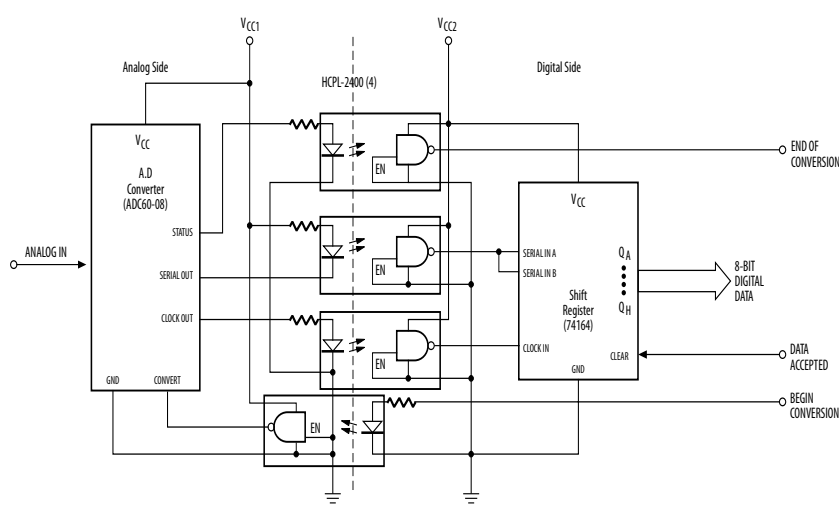

- Totem pole & tri state output (with enable pin for HCPL-2400) to eliminate output pull-up resistors
- Certified with reinforced insulation under IEC/EN/DIN EN 60747-5-5, approved with $V_{iorm}=630V_{peak}$ (option 060)
- DIP8 package (for min. 7mm creepage/clearance need) with 5kV V_{iso} protection (option 020)
- 2-channel for higher integration and space saving (HCPL-2430)

Applications

- Computer-peripheral interface
- High speed disk drive I/O
- Isolated bus driver (networking applications)
- Isolation of higher speed logic system
- Switching noise elimination

10 MBd Logic Gate/ CMOS Optocoupler

Description

This isolated RS-422 circuit uses two high-speed optocouplers that can switch up to 10 MBd signals. An isolated power supply V_{CC2} is required to power the DS 75176A driver/receiver integrated circuit.

The main benefit is preventing common-mode transients from interfering with the signal.

Avago's new range of 3.3 V/5 V optocouplers are the first commercially available optocouplers designed to meet the JEDEC specification for 3.3 V LVTTTL/LVCMOS logic, thereby simplifying the implementation of isolation in systems utilizing 3.3 V logic circuits.

A typical Power over Ethernet power source equipment (PSE) block diagram uses two 15 MBd 3.3 V optocouplers to isolate between the 13 W 48 V power supply and the inter-integrated chip (I2C) control bus.

Benefits

- Provides high data rate transmission. It also offer high CMR for signal isolation from common mode transient noises

Applications

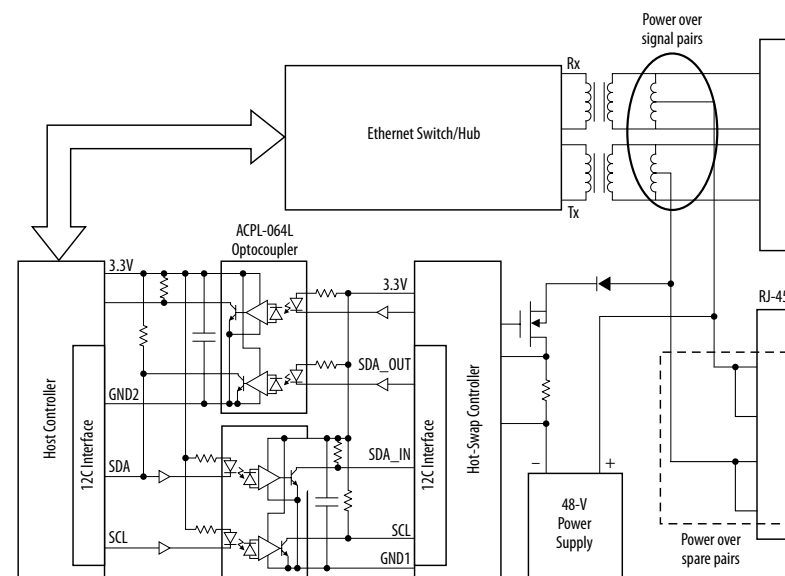

- Computer-peripheral interface
- Instrument input/output isolation
- Isolated line receiver
- Microprocessor system interface
- Switching power supply

8 MBd Logic Gate Optocoupler

Description

The circuit shows a CMOS interface circuit for 8 MBd applications. Over the temperature range a CMOS CD4050 Hex Buffer can source about 0.7 mA (minimum), which is sufficient to drive the HCPL-2300 optocoupler. The 20 pF capacitor allows peaking currents to assist the LED in turning on and off quickly.

These optocouplers utilize a simple interface requiring low power consumption.

Benefits

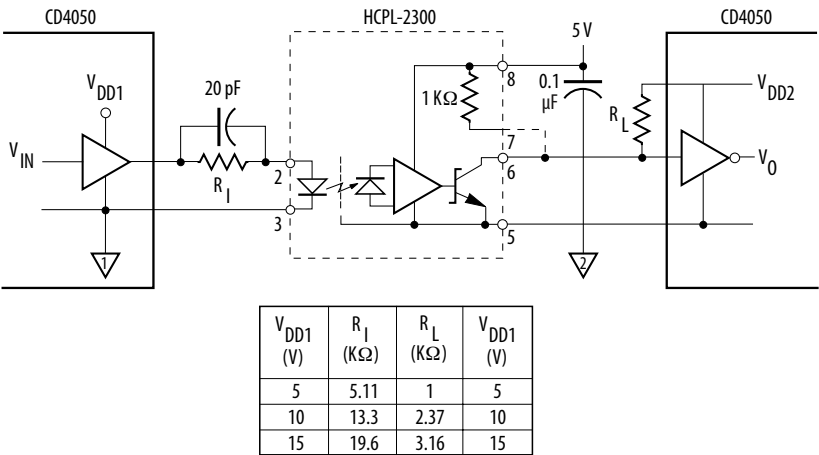

- Offers low power consumption

Applications

- Computer-peripheral interface
- Digital isolation for A/D, D/A conversion
- High speed, long distance isolated line receiver
- Level shifting
- RS 232C interface

Typical CMOS Interface Block Diagram

5 MBd Logic Gate/CMOS Optocoupler

Description

For the CMOS Optocouplers, they consume low power, at maximum supply current of 1.1mA per channel and forward current as low as 1.6mA, thus allowing direct current drive by most microprocessors. They operate with low supply voltage for supply scaling of FPGA and microcontrollers, are CMOS output and optical receiver input stages with built-in Schmitt triggers to provide logic compatible waveforms, eliminating the need for additional waveshaping. A superior internal shield guarantees common mode transient immunity of 25 kV/ μ s at a common mode voltage of 1000 V over a temperature range of -40°C to 105°C. The stretched SO6/SO8 packages are up to 50% smaller than the conventional DIP package, facilitates smaller compact design.

For the Logic Gate Optocouplers, the circuit shown in the typical TTL interface block diagram is an interface between two TTL gates using an active output (totem pole) optocoupler, the HCPL-2201. A series switching circuit drives the optocoupler LED. The active output HCPL-2201 can be directly connected to a TTL gate, and no pull-up resistor is required. The HCPL-2201 can sink enough current to handle up to 16 LSTTL or 4 TTL loads.

Typically, the 5 MBd logic gate optocoupler is used in the Isolated High-Low Gate Drive interface block diagram as shown below.

Benefits

- Pull up resistor not required at the optocoupler output
- Low power consumption with low supply current @1.1mA max and low forward current @1.6mA min (5MBd CMOS Optocoupler)
- Low Supply voltages to 2.5V (5MBd CMOS Optocoupler)
- Wide operating supply voltages up to 20V (5MBd Logic Gate Optocoupler)
- Built-in Schmitt Triggers for better signal integrity and accuracy in a noisy network/circuits.
- High CMR (min. 25kV/ μ s@VCM=1kV) (5MBd CMOS Optocoupler)

Applications

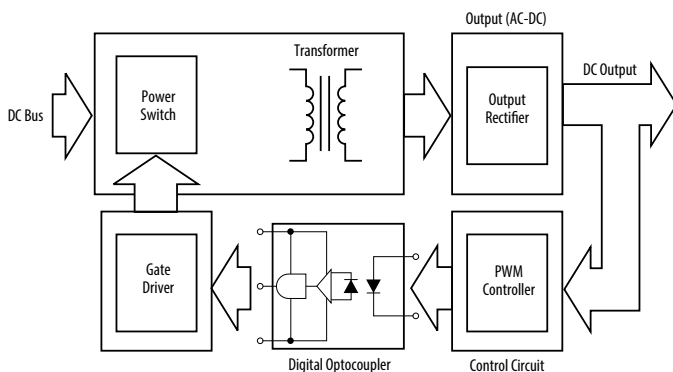

- Computer-peripheral interface
- Ground loop
- High speed line receiver
- Microprocessor system interface
- Pulse transformer replacement

1 MBd Transistor Output Optocoupler

Description

The ACPL-M50L (single-channel in SO-5 footprint), ACPL-054L (dual-channel in SO-8 footprint), ACPL-W50L (single-channel in stretched SO-6 footprint) and ACPL-K54L (dual-channel in stretched SO-8 footprint) are low power, low-input current, 1MBd digital optocouplers.

They have an increased common mode transient immunity of 15kV/μs minimum at VCM = 1500V over a temperature range of -40 to 105°C. The current transfer ratio (CTR) is 140% typical for ACPL-M50L or 130% typical for ACPL-054L/W50L/K54L at IF = 3mA. This digital optocoupler can be used in any TTL/ CMOS, TTL/ LSTTL or wide bandwidth analog applications.

The new ACNT-H50L comes in Stretched SO8 package with 14.2mm creepage/clearance and high voltage insulation capability, is suitable for isolated communication logic interface and control in high-voltage power systems such as 690VAC drives, renewable inverters and medical equipments.

The circuit in the level shifting/TTL interface block diagram shows how a 0 to 5 V logic signal can be level shifted to a -15 to 0 V signal. This circuit can safely be used for level shifting up to ±800 V. The circuit uses an open collector output logic gate, the 74LS405, to drive the LED of the 6N135/6 optocoupler. The 6N135/6 also has an open-collector output. The designer chooses RIN to agree with the equation shown in the schematic. This equation sets the value of the optocoupler LED forward current.

The output of the 6N135/6 requires a pull-up resistor, RL. The current-transfer ratio (CTR) of the optocoupler determines the maximum amount of current the optocoupler output can sink while maintaining the output voltage (between pins 5 and 6) of 0.5 V or less.

The benefit of the application is that it reduces the transient immunity problem and it is a convenient way of replacing the pulse transformer for high-voltage level shifting.

Benefits

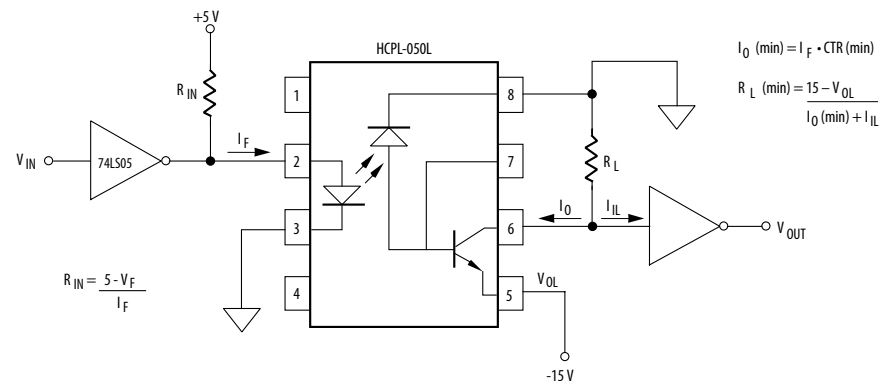

- Allow level shifting capability
- High current transfer ratio

Applications

- Analog signal ground isolation
- High speed logic ground isolation
- Line receivers
- Replace pulse transformers
- Replace slow phototransistor isolators

100 kBd Darlington Transistor Output Optocoupler

Description

This differentially driven circuit can use up to eight 6N138 optocouplers at various receivers along the 90 m line. All stations are isolated. The first station would draw approximately 2.7 mA current, and the last station 1.8 mA of LED drive current. The output grounds of the optocoupler may be electrically separate.

The benefit of the application is its simple, low-cost, multidrop circuit for low signaling rates.

Benefits

- High CTR with low input current
- Low power consumption

Applications

- Digital logic ground isolation
- FIA RS-232C line receiver
- Low power systems and ground isolation
- Telephone ring detector

R²Coupler™

(High Temperature, Automotive Grade)

Description

Proven Quality and Reliability Track Record

Avago Technologies' R²Coupler isolation products are designed to meet the stringent requirements for the automotive market. Building upon 35 years of optocoupler expertise, the automotive parts are manufactured in a TS 16949 certified manufacturing facility and are PPAP supported. Robustness is demonstrated through qualification in accordance to AEC-Q100 Grade 1 guidelines. Avago optocouplers have been used extensively in long life and mission critical isolation applications such as locomotive transportation, aerospace, military and industrial automation. Since the introduction of R²Coupler products in 2006, these automotive grade products have seen wide adoption by many automotive suppliers with millions of units operating in the field.

Technology Leader

Avago Technologies is the first supplier to introduce 125°C plastic optocouplers for automotive applications, with the largest portfolio of optocouplers ranging from IGBT gate drivers, isolation amplifier, high speed and low power digital isolation and analog feedback isolation. Advanced LED technology enabled the best-in-class performance over lifetime and

at high temperature. These optocouplers maintain their very high voltage ratings with robust and reliable galvanic isolation technology with international component safety certifications (UL1577, IEC 60747-5-5, CSA Component Notice 5). Optocouplers demonstrate superior EMI and common mode noise immunity.

Benefits

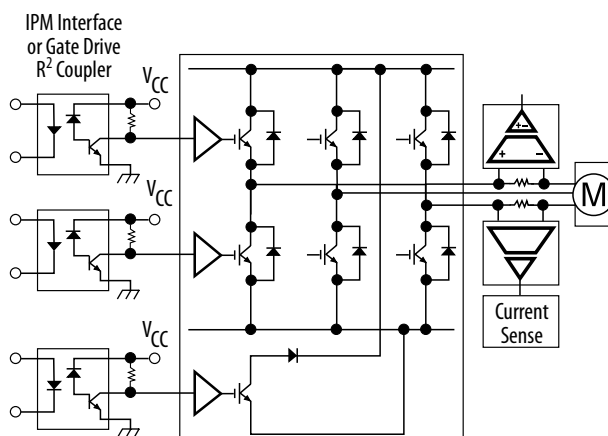

- Qualified to AEC-Q100 Grade 1 guidelines
- TS 16949 manufacturing facility with PPAP support
- Wide operating temperature (-40°C to 125°C)
- High CMR (50 kV/μs at VCM=1kV)
- Reinforced Reliability suitable for automotive applications
- Low input LED drive current
- Worldwide Safety Approval (UL1577, IEC60747-5-5, CSA)

Applications

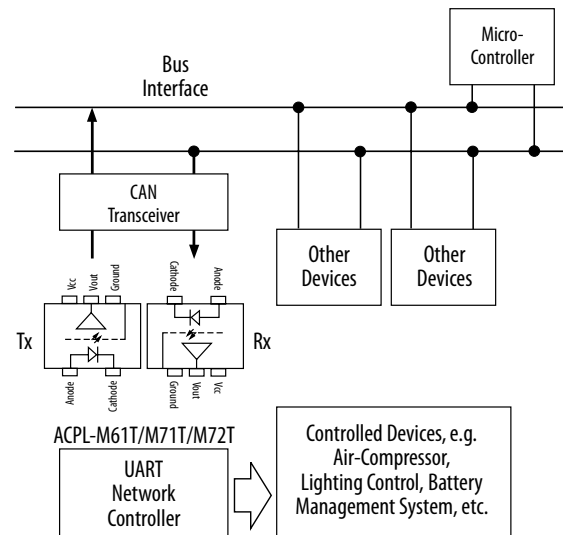

- Automotive IPM and gate driver for inverters, DC-DC converter and on-board chargers
- Automotive bus voltage and current/voltage sensing in inverters, converters and on-board chargers
- Automotive CANbus, UART, LIN and other digital communications
- Isolated wake-up and status control and feedback
- Analog feedback in AC-DC and DC-DC converters
- Low power digital isolation in battery management systems

Digital Isolator

Description

The ACML-74xx series of CMOS digital isolators utilizes magnetic coupling through thick insulation to provide high speed, high insulation performance yet consuming low power at high data rates.

The HCPL-90xx/-09xx series CMOS digital isolators integrated with giant magnetoresistive (GMR) technology enable high speed performance and excellent transient immunity specifications.

All devices operate at 3.3 V or 5 V supply voltages, boasting low power consumption. They are able to withstand high common mode voltages, 25kV/ μ s at $V_{cm}=1000V$, and meet UL 1577 and IEC 60950-1, IEC 61010-1 and IEC 60601-1 safety ratings.

Benefits

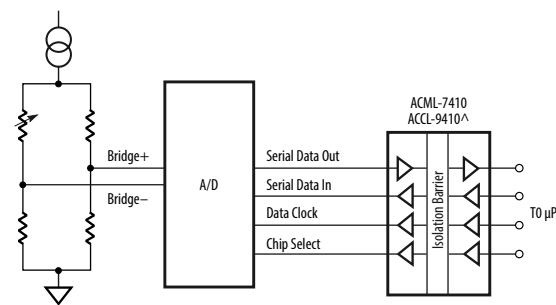

- High insulation: UL1577 (5.6kVrms 1 min rating) and IEC 60950-1 and IEC 61010-1 working voltage (up to 1132Vpeak)
- High speed (100MBd), low PWD (3ns) and low T_p (18ns)
- Wide temperature operation (-40°C to 105°C)
- Buffer input and CMOS output (eliminate input/output resistors)
- Multi-channel (1, 2 & 4-ch)
- Low power consumption

Applications

- Digital fieldbus isolation
- Multiplexed data transmission
- Computer peripheral interface
- High speed digital systems
- Isolated data interfaces
- Logic level shifting

Integrated Gate Drive Optocoupler

Description

In typical motor drive and renewable energy power conversion systems, there are several signals between the power devices and the micro-controller that need isolation and additional customized functions such as gate drive and current/voltage sensing. Avago Technologies' gate drive and isolation amplifier products provide low cost, high performance solutions for such applications.

High performance motor drives require precision timing for turning on and off the power devices on the inverter while renewable energy inverter needs to be reliable and efficient when converting DC-link voltage to usable AC power output. The microcontroller that controls these functions needs to be isolated from the high voltage inverter side. Avago Technologies offers a variety of optocouplers that have built-in gate drive capability. These gate drive optocouplers come in wide range of output current from 0.4A to 5A, and selected parts with integrated protection features such as Active Miller Clamp, under voltage lockout, fault, UVLO and GATE status feedback and desaturation detection. Beside protection features, Avago has also integrated DC-DC controller for floating power supply and LED driver to make design more compact and affordable.

Benefits

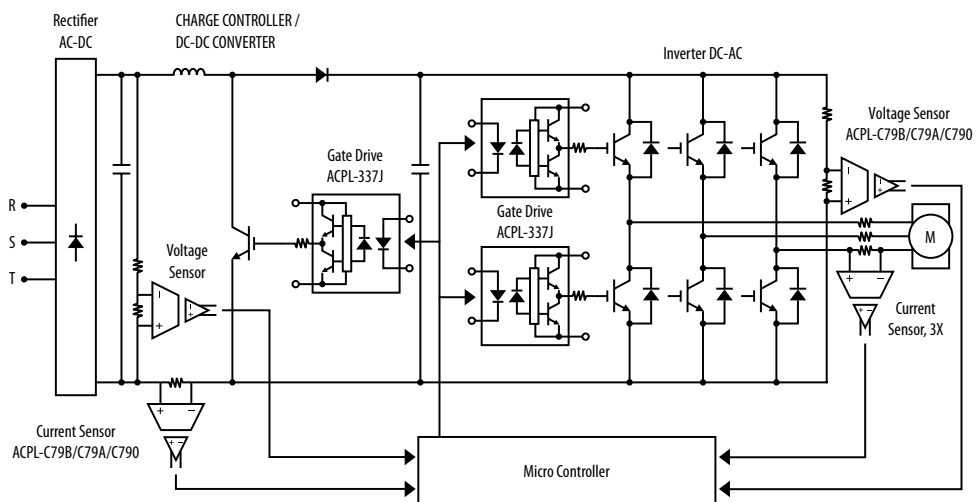

- Rail-to-rail output voltage for reliable IGBTs drive
- Integrated fault protection, feedback, Active Miller Clamp, DC-DC controller and LED driver to reduce component count and solution cost
- Short propagation delay for faster switching
- Fast IGBT switching for improved efficiency
- Low power consumption for bootstrap operation
- High common mode transient rejection ensures reliable operation under noisy environment
- Direct drive of high power IGBTs
- Reinforced insulation

Applications

- Isolated IGBT and Power/SiC/GaN MOSFET gate drive
- AC and brushless DC motor drives
- Renewable energy inverters
- Energy storage system
- Electric vehicle charging station
- Industrial inverters
- Switching power supplies
- Uninterruptible power supplies (UPS)

Intelligent Power Module Interface Optocoupler

Description

The ACNV/HCNW/HCPL-45xx and ACPL-M/P/W484 series optocouplers are designed for Intelligent Power Module (IPM) drive applications such as inverters and motor control systems. These high speed optocouplers have high CMR performance that helps to reject common mode noise in such high voltage systems. The output of ACNV/HCNW/HCPL-45xx devices is conventional open-collector; the output of ACPL-M/P/W484 devices come with totem pole output stage eliminates the necessity of using the pull-up resistor and allows direct drive to the IPM. ACNV45xx devices allow very high working voltage for use in Renewable Energy Supply system.

In addition to Intelligent Power Module drive, the ACNV/HCNW/HCPL-45xx and ACPL-M/P/W484 series optocouplers can be used in general purpose isolation applications like high speed logic ground isolation, isolated line receivers, and microprocessor system interfaces.

Benefits

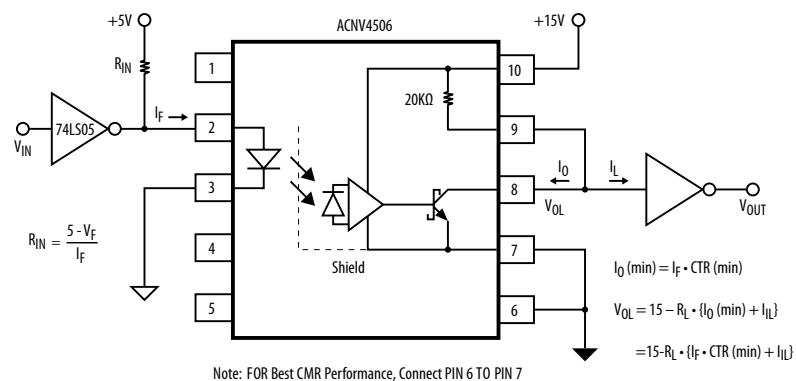

- Short propagation delay for faster switching
- Fast IGBT switching for improved efficiency
- High Common Mode Transient Rejection ensures reliable operation under noisy environment
- Wide operating temperature range
- Reinforced insulation

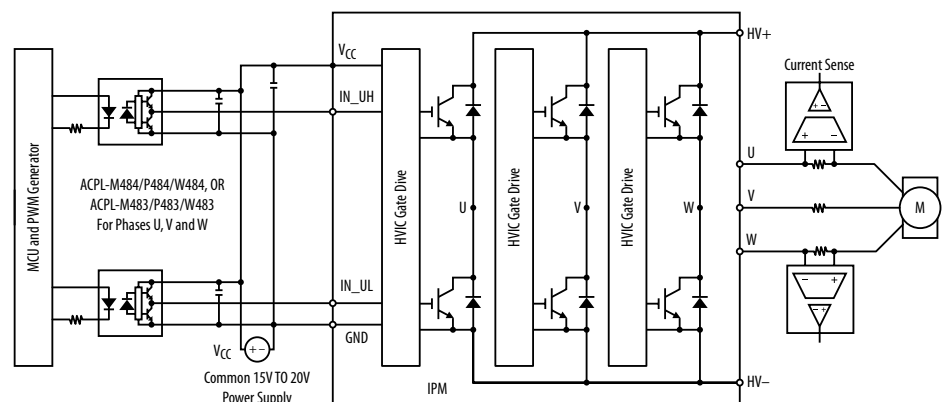

Applications

- Intelligent power module
- Inverter/Motor control
- Power switch design
- General purpose digital isolation

Isolated Line Receiver

Description

The HCPL-2602/12 have input current regulators and integrated high gain photo detectors. The input regulator serves as a line terminator for line receiver applications. The higher LED threshold voltage provides improved immunity to differential noise and the rejection internally shielded detector provides better common-mode rejection with no sacrifice in speed.

The diagram below illustrates an unbalanced line receiver using the integrated voltage-clamp input optocoupler, HCPL-2602. TTL data is converted to a differential signal via the differential line driver, and transmitted over twisted-pair wire. The Schottky diode helps to improve the turn-on and turn-off delays.

Benefits

- Line termination included – no extra circuitry required

Applications

- Isolated line receiver
- Computer-peripheral interface
- Microprocessor system interface
- Digital isolation for a/d, d/a conversion
- Current sensing
- Instrument Input/Output isolation
- Ground loop elimination
- Pulse transformer replacement
- Power transistor isolation in motor drives

Isolated 20 mA Current Loop Transmitter/Receiver

Description

Data transmission between electronic equipment which are physically separated by a distance of more than a few feet can be achieved by using the HCPL-4100 (transmitter) and the HCPL-4200 (receiver) optocouplers. These devices include specialized circuits for 20 mA digital current loop applications, and are designed to easily interface TTL and CMOS logic systems to current loop systems.

20 mA current loop systems conventionally signal a logic high state by transmitting 20 mA of loop current, and signal a logic low state by allowing no more than few milli-amperes of loop current. Optical coupling loops break ground loops and provide very

high immunity to common mode interference. These devices are simple to use in a data transmission system for industrial applications and maintain integrity.

Benefits

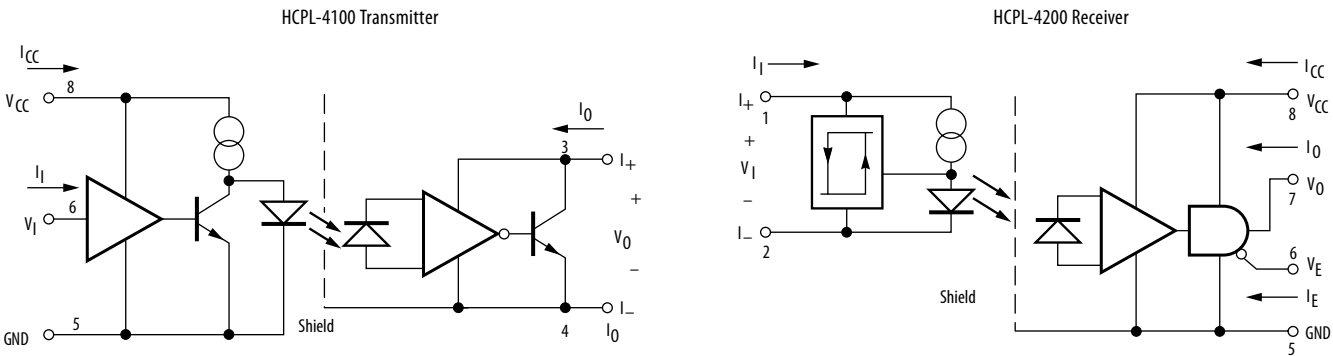

- Direct control of the 20 mA current loop
- High noise immunity

Applications

- Isolated 20 mA current loop transmitter in:
- Industrial control equipment
- Computer peripherals
- Data communications equipment

Isolated Voltage/Current Detector

Description

In the implementation of an interface from an electrically noisy environment into logic systems, it is often desirable to establish some current or voltage switching point or input switching threshold – the HCPL-3700 optocoupler provides such a solution. This device combines an AC or DC voltage and/or current detection function with high sensing input buffer ICs which permit control of threshold levels over a wide range like sensing industrial control systems, and ring detection in telephone system micro-processor interfacing.

The HCPL-0370/3700/3760 threshold-sensing optocoupler can be used for sensing the AC/DC power on/off condition. At the optocoupler input, only a pair of series resistors $R_X/2$ are required to limit the current. The AC signal can be filtered with a capacitor at either the input or the output of the optocoupler. The value of R_X determines the threshold sensing voltage.

HCPL-0370/3700/3760's low threshold current reduces power dissipation and its built-in diode bridge and hysteresis circuit reduces the number of external components used.

Benefits

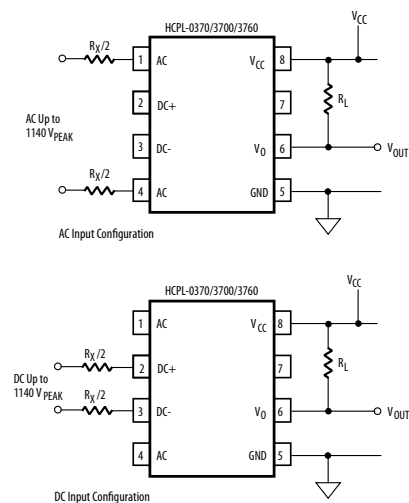

- Low threshold current reduces power dissipation
- Hysteresis circuit reduces external components and PCB size

Applications

- Limit switch sensing
- AC/DC voltage and current detector
- Relay contact monitor
- Relay coil voltage monitor
- User configurable voltage/current limit detection
- Microprocessor interfacing

High Linearity Analog Optocoupler

Description

Avago Technologies' Analog Isolation Applications with Linear Optocouplers HCNR200/1 constitute the basic optical coupling building blocks for high linearity isolation applications. The HCNR200/1 comprises of a high performance LED and two closely matched photodiodes. The output photodiode produces a photo current that is linearly related to the light output of the LED. These high speed, low cost isolation amplifiers are highly suitable for the use in the feedback path of switched mode power supplies, motor speed and position measurement. Very high linearity and excellent low transfer gain variation are the advantages of using HCNR200/1.

This circuit can be used in applications where high bandwidth, low-cost, and stable gain are required.

Benefits

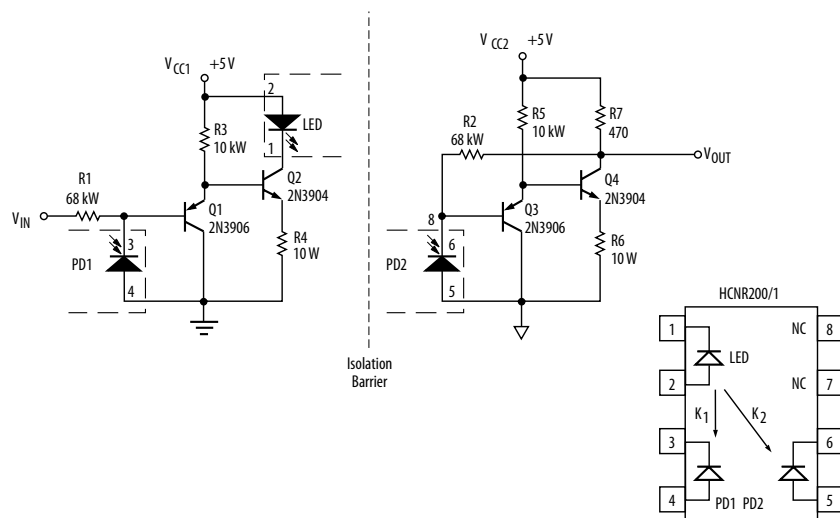

- Simple and low cost
- Flexible design with the LED and both Photodiodes accessible to the designer
- Reinforced insulation

Applications

- Industrial process control:
- Transducer isolator
- Isolator for thermocouples
- 4 mA to 20 mA loop isolation
- Low cost analog isolation
- Telecom: modem, PBX
- Switching power supply feedback loop and feedforward
- Monitor motor supply voltage
- Medical

Wideband Analog/Video Optocoupler

Description

The HCPL-4562 and HCNW 4562 are recommended for very high bandwidth (up to 15 MHz) AC analog designs such as coupling audio or video signals.

This circuit, with the HCPL-4562 wideband analog/video optocoupler, is optimized for video signal coupling. The peaked response of the detector circuit helps extend the frequency range over which the gain is relatively constant. The number of gain stages, the overall circuit topology, and the DC bias point are all chosen to maximize the bandwidth.

HCPL-4562 provides simple and cost effective solutions for coupling audio and video signals.

Benefits

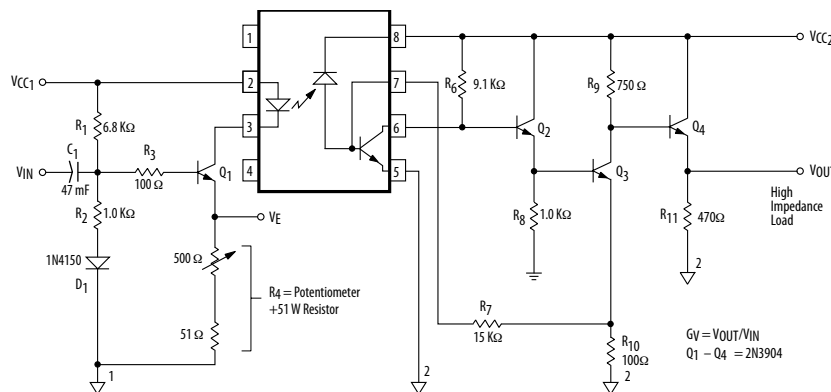

- Optimized for video signal coupling
- Simple design for audio and video coupling
- Cost effective
- Reinforced insulation

Applications

- Video isolation for the following standards/formats:
 - NTSC, PAL, SECAM, S-VHS, ANALOG RGB
- Low drive current feedback
- Element in switching power supplies: ISDN networks
- A/D converter signal isolation
- Analog signal ground isolation
- High voltage insulation

Hermetic High Performance Optocouplers

Description

Isolating one portion of an electrical circuit from another is the primary function of an optocoupler. These devices isolate different voltage levels between the input and output source. Avago Technologies' optocouplers are ideally suited for isolating highly sensitive portions of a circuit from the effects of transmitted common mode signals; offering a variety of input and output characteristics that enable their use in high speed, high performance applications. Avago Technologies' hermetic optocouplers excel in designs for harsh environments that require an exceptionally strong, rugged enclosure.

For design ease, we offer most functions in 8- and 16-Pin DIPs, 20 terminal LCCC's and 16-Pin Flat Packs with various lead configurations for thru-hole or surface mount, with either single, dual or quad channels. These products are capable of operation and storage over the full military temperature range of -55°C to +125°C and can be purchased as either commercial product or with full MIL-PRF-38534 Class Level E, H or K. In line with regulations and our customers needs, we do not offer unleaded solder on our solder dipped devices. All devices are manufactured and tested on a MIL-PRF-38534 certified line and are included in the DLA (Defense Logistics Agency) Qualified Products Database Supplemental Information Sheets QPDSIS-38534 as Hybrid Microcircuits.

Avago Technologies has supplied high reliability hermetic optocoupler products since 1975 for use in state-of-the-art applications. To meet the requirements of high reliability,

products must be designed with rugged capabilities. They must be able to withstand severe levels of environmental stress and exposure without failure over extended periods of time. We have accomplished this objective in designing optocouplers that have proven their merits in numerous advanced space and defense programs in the international marketplace. Avago Technologies' continuity and support of the industry has remained stable, with zero product obsolescence. We are committed to continued process and performance upgrades, backed up with diligent notification to our customers of any changes made using the GIDEP system.

Statistical Process Control and extensive reliability monitoring (life testing of hundreds of thousands of hours) are standard processes for hermetic optocouplers. Control charts are utilized at each critical step of the process and reviewed by product engineering to assure expected quality and reliability.

Avago Technologies is a champion of DLA's QPDSIS and SMD (Standard Microcircuit Drawing) programs. We support standardization, which results in cost-effectiveness and a streamlined acquisition process. As such Avago Technologies offers all Class E, H and K products under SMD numbers. Each Hi-Rel device is dual marked with the DLA SMD and Avago Technologies' part numbers.

Our Screening and Quality Conformance Inspection is outlined on the following page. Custom programs may include full Group A, B, C, and D inspection if required.

Benefits

- Long term commitment - zero obsolescence
- Recognized for high quality, reliability, and customer support
- Certified and qualified to Classes E, H and K of MIL-PRF-38534
- -55°C to +125°C operating temperature range
- All products available on DLA SMD's
- General purpose and application specific products available

Applications

Military, aerospace and harsh industrial applications such as:

- Switching power supplies/UPS
- Motor control
- Field bus
- Inverters
- Power distribution
- Communications

Final Elec. Test		Group A, subgroup 2 (DC @ +125°C) Group A, subgroup 3 (DC @ -55°C) Group A, subgroup 9 (AC @ +25°C) Group A, subgroup 10 (AC @ +125°C) Group A, subgroup 11 (AC @ -55°C)	100% 100% 100% 100% 100%	100% 100% 100% 100% 100%
Fine Leak	1014	Condition A	100%	100%
Gross Leak	1014	Condition C	100%	100%
Radiographics	2012		N/A	100%
External visual	2009		100%	100%

Note: PIND and RGA (Internal Water Vapor Content) testing (Group C) is no longer required on Avago Technologies optocouplers due to the construction of the devices. DLA approved this test elimination in 2002.

Quality Conformance Inspection

Group A Testing

Group A testing is satisfied per the in-line verification testing requirements of MIL-PRF-38534 for Class H devices utilizing Option 1.

Group A testing is performed per in-line sample testing requirements of MIL-PRF-38534 for Class E and K devices utilizing Option 2.

Group B Testing

Group B testing is satisfied by performing in-line process monitors as required by MIL-PRF-38534 for Class H devices utilizing Option 1.

Group B testing is satisfied by performing end of line sampling as required by MIL-PRF-38534 for Class E and K devices utilizing Option 2.

Group C Testing

Group C testing is performed on first inspection lots and as required to evaluate or qualify changes per the requirements of MIL-PRF-38534.

Group D Testing

Group D testing is not performed. Note that Group D requirements are satisfied during incoming inspection element evaluation.

Please be advised that Class E, H and K devices have very similar Screening and Quality Conformance Inspection requirements as shown above. Class E and K devices, however, have substantially more stringent element evaluation and assembly criteria. The quality and reliability of these devices must be built in, not tested out.

Note: Number in bracket () indicates non-optical isolation product.

1. 3.3V Digital Optocoupler Family
2. 1 MBd Transistor Output Optocoupler
3. 100 kBd Darlington Transistor Output Optocoupler
4. 5 MBd Logic Gate Optocoupler
5. 8 MBd Logic Gate Optocoupler

6. 10 MBd Logic Gate Optocoupler
7. 20 MBd Logic Gate Optocoupler
8. High Speed Digital CMOS Logic Gate Optocoupler
9. Integrated Gate Drive Optocoupler
10. Miniature Analog Isolation Amplifier

11. Isolated Line Receiver
12. Isolated 20 mA Current Loop Transmitter/Receiver
13. AC/DC to Logic Interface
14. High Linearity Analog Optocoupler
15. Wideband Analog/Video Optocoupler

16. Hermetic High Performance Optocoupler
17. Automotive Optocoupler
18. Digital Isolator
19. Intelligent Power Module Interface Optocoupler

Optical Sensors

Proximity Sensors

Avago Technologies offers a full range of Optical Proximity Sensors to meet the requirements of today's industrial and consumer applications. The basic construction of an optical proximity sensor consists of an IR LED and a photo-diode. The LED and the photodiode of an Avago's proximity sensor are housed in a specially designed metal-shield to ensure excellent optical isolation. The result is a small size device with low optical cross-talk and excellent power efficiency.

Avago proximity sensors are offered in a variety of options in terms of features, packages and level of integration. Product offerings range from discrete to fully integration modules and choice of analog or digital output. These devices offer engineers the widest selection of features and the design flexibility to meet a variety of performance applications.

Ambient Light Sensor

Avago Technologies offers a series of Ambient Light Sensors that provide precise light detection for a wide range of ambient brightness. These devices are designed with close-to-human-eye spectral response that mimic human eyes perception and hence provide consistent performance under different light sources such as sunlight, fluorescent and incandescent. These Sensors are packaged in miniature chipLED lead-free, RoHS compliance surface mount package and especially suited for mobile phones and portable devices. It is commonly use in mobile phone to enable auto LCD backlight adjustment and key pad lighting depending on the surrounding ambient brightness to achieve optimum viewing comfort and save battery power.

Integrated Ambient Light and Proximity Sensor

Part Number	Size (LxWxH) (mm)	Supply Voltage (V)	ALS Dynamic Range	Max. Detection Distance	PS Output	ALS Output
APDS-9900	3.94 x 2.36 x 1.35	2.5 to 3.6	0.01 to 10k lux	Near zero to 100mm	I ² C Digital count output	I ² C Digital count output
APDS-9901	3.94 x 2.36 x 1.35	2.5 to 3.6	0.01 to 10k lux	Near zero to 100mm	I ² C Digital count output	I ² C Digital count output
APDS-9930	3.94 x 2.36 x 1.35	2.2 to 3.6	0.01 to 30k lux	Near zero to 100mm	I ² C Digital count output	I ² C Digital count output

Integrated Ambient Light, RGB and Proximity Sensor

Part Number	Size (LxWxH) (mm)	Supply Voltage (V)	Max. Detection Distance	PS Output	ALS Output	RGB Output
APDS-9950	3.94 x 2.36 x 1.35	2.5 to 3.5	Near zero to 100mm	I ² C Digital countoutput	I ² C Digital count output	I ² C Digital count output

Integrated Ambient Light, RGB, Proximity and Gesture Sensor

Part Number	Size (LxWxH) (mm)	Supply Voltage (V)	Max. Detection Distance	PS Output	ALS Output	RGB Output	Gesture Output
APDS-9960	3.94 x 2.36 x 1.35	2.4 to 3.6	Near zero to 100mm	I ² C Digital count-output	I ² C Digital count output	I ² C Digital count output	I ² C Digital count output

Optical Proximity Sensor

Part Number	Size (LxWxH) (mm)	Supply Voltage (V)	Max. Detection Distance	PS Output
HSDL-9100-021	7.10 x 2.75 x 2.7		Near zero to 100mm	Analog
HSDL-9100-024	7.10 x 2.75 x 2.4		Near zero to 100mm	Analog
APDS-9190	3.94 x 2.36 x 1.35	2.5 to 3.6	Near zero to 100mm	I ² C Digital count output
APDS-9130	3.94 x 2.36 x 1.35	2.2 to 3.6	Near zero to 100mm	I ² C Digital count output

Proximity Sensing Conditioning IC

Part Number	Size	Supply Voltage (V)	Max. Detection Distance	PS Output
APDS-9700	QFN 2 mm x 2 mm	2.4 to 3.6	Near zero to 60mm	Analog (with HI/LO digital o/p)
APDS-9702	QFN 2 mm x 2 mm	2.4 to 3.6	Near zero to 60mm	Analog (with HI/LO digital o/p)

Ambient Light Sensor

Part Number	Size (LxWxH) (mm)	Package	Supply Voltage (V)	Typical Output Current @ 100 Lux (µA)
APDS-9005	1.60 x 1.5 x 0.55	6 pin - ChipLED	1.8 to 5.5	40
APDS-9006	3.2 x 1.6 x 1.1	4 pin - ChipLED Reverse mounting	2.4 to 5.5	40
APDS-9007	2.4 x 2.0 x 0.8 x	6 pin - ChipLED	2.0 to 3.6	30 µA at 1Klux (Logarithmic output)
APDS-9008	1.60 x 1.5 x 0.55	6 pin - ChipLED	1.6 to 5.5	40
APDS-9300	2.6 x 2.2 x 0.55	6 pin - ChipLED	2.4 to 3.0	I ² C Digital count output
APDS-9301	2.6 x 2.2 x 0.55	6 pin - ChipLED	2.7 to 3.6	I ² C Digital count output
APDS-9303	2.6 x 2.2 x 0.55	6 pin - ChipLED	2.7 to 3.6	SMBus Digital count output
APDS-9309	2.00 x 2.00 x 0.65	6 pin - ChipLED	2.4 to 3.0	I ² C Digital count output

Connecting everything®

Broadcom Limited is a diversified global semiconductor leader built on 50 years of innovation, collaboration and engineering excellence.

Broadcom's extensive product portfolio serves multiple applications within four primary end markets: wired infrastructure, wireless communications, enterprise storage and industrial & others. Applications for our products in these end markets include: data center networking, home connectivity, broadband access, telecommunications equipment, smartphones and base stations, data center servers and storage, factory automation, power generation and alternative energy systems, and displays.

Broadcom combines global scale, engineering depth, broad product portfolio diversity and superior execution and operational focus to deliver category-leading connectivity products so its customers can build and grow successful businesses today and in the future.
